

Nexial-topology:

A native ability from which the iconic symbols of culture appear ‘non-locally’.

‘Most research in cognitive science has been conducted on ordinary cognition’
(Nersessian 2002a p.134).

‘Nexial’-topology
is native to the
body-brain

The appearance of mass, inertia, or heaviness 3 people's drawings - A 'non-local' cultural imaging?

Abbott 1884, 'Flatland'

Bouchon 2004

Einstein 1913

Turning-around the animated geometry into conventionalised rePresentations

Einstein's **geometry**
of spacetime
(a topologic space)
and gravity

Mathematically formulated: the **inverted** image interprets as a massive *body* or a *physical* light (with a singularity: black hole)

‘Idealization is used to simplify a system to a point where mathematics can be applied to it.’ (Nersessian 1997, p.17)

Compare to ‘Making one’ in Qigong, mysticism, and cosmology,

Deep confusing question about ‘the world’ (archaic)
and about reality and space (modern):

‘whence from?’

(Wen Wei, Ou, 1999)

Bubble-world making: the result of conventionalised topologies

The Multiverse SuperUniverse – the CIM and its bubbles produce extrusion of a potentially infinite number of regional universes.— Vacuum Fluctuation Models.

Inflation produces bubbles (mini-universes) that do not interact or coalesce but recede from each other.
– Chaotic Inflationary Model.

Statistics of shape (see animation <Bubble up-down>)
Examples: systemic boundaries, boundary conditions, bodies, selves, worlds, body concretions (growths, deposits), social groups

Is 'it' real, ideal, imaginary?... or 'imaginary' and 'real' numbers of time / space projections?

Maxwell's first model
(drawn from his paper)
(Nercessian 2002 p.12)

‘At one point Maxwell thought that
the vortex model might be true. (p6)
‘The imaginary model was necessary
for the creation of the theories.’
(Nercessian 2002 p.12)

‘East wind’
(Bouchon 2005)

Recall: [Left: a plane of real number, right: a plane with imaginary numbers]

traditional
symbols

Compare Einstein to the conventionalised question of ‘unbounded’ in Sc-terms (space-time)

‘... that the Universe must be boundless. This does not necessary mean that the Universe is infinite, although this is the simplest solution. Notice also that space is not a receptacle for the Universe, space is physical and is contained with the Universe. Lastly, if the Universe contains everything, the it must contain its own origin mechanism, a bootstrap program’ Schombert. J., June 2006, Department of Physics, U. of Oregon

‘Nexial’-topology:

A ‘native’, non-algorithmic, non-linguistic way to ‘see’ the ‘shaping’ of a situation without differentiating according to conventionalised framing.

marika bouchon, University of Western Sydney
